

# COVID-19 DECISION TREE – CHILDCARE (1.14.22)

## to Determine Isolation or Quarantine

1. ANYTIME a test is **positive** (regardless of vaccination status or absence of symptoms), **isolate at home** for **≥5 days** after any symptoms began (or date positive test collected) and **no fever for ≥24 hours** and until symptoms improve.
2. All FDA-approved COVID tests can be used for diagnosis or to end isolation/quarantine. (Antigen preferred to end isolation.) Staff or children may be required to verify at-home test results.
3. **Close contact**= <6 feet from a confirmed case for ≥15 minutes (can be multiple short-duration exposures) over a 24-hour period, beginning 2 days before the case was infectious.
4. "Not fully vaccinated"= Age 18+ who received initial series & are booster-eligible but have **not yet received a booster**  
"Fully vaccinated/boosted"= Ages 5-17 who completed their initial series; adults boosted or vaccinated but not yet booster eligible; or anyone who had COVID-19 within the last 90 days
5. If case is a **household (HH) member**, contacts **NOT** fully vaccinated (as in #4) extend their quarantine for at least 5 days (10 days if untested) from the end of the case's isolation.
